

OUR PRODUCTS

Speroni, in close relationship with its customers, is dedicated to the manufacturing and development of products and services for the control and inspection of the mechanical manufacturing processes. The Speroni family of products include:

- Systems for the preset measurement of all tools; these systems are available in a range of manual, motorized and completely automatic, with 2, 3, 4 and 5 axis.
- "Tool Room" and "Conformity Room" products and services for the complete management of the tool resource guaranteeing the right tool in the right place at the right time.
- CMMs - "Inspection Robots" - for the fully automatic and operator independent certification of the geometrical quality of parts directly in the shop floor environment.
- Education Services, available as consulting and technical support, also directly at the customer's site, for the maximization of the correct use of our solutions.
- Personalized after sale services

All of our products are designed in order to allow our customers to graduate their investment. The base versions can be integrated, upgraded, and retrofitted with additional investments - not substitutive ones - which will add to their initial investment as their needs evolve.
